

Sprint 2 Review

X2CRM Web Portal

X2Force

July 17th, 2018

Actions to be halted:

- Working on getting GrapesJS to show on blank HTML page
- Button to “display” URL (using filler data as of now)
- Button to go to webpage builder (doesn’t work as of yet)
- Working on having alternate server to run app on

Actions to be started:

- Incorporate more GrapesJS tools into the GrapesJS builder to allow the user more customization
- Get “Go to Webpage” button to link to the blank HTML template so the user can start making their webpage
- Have error checking for invalid names for users’ webpages so we can create valid URLs for said webpages

Actions to be continued:

- N/A

Work Completed:

- Blank HTML page with GrapesJS on it
- Button to display URL (uses test data for now)
- Button that will be linked to the blank HTML page (“Go to webpage”)

Work Not Completed:

- All tasks completed

Work Completion Rate:

- Completed 1/1 user stories (As a X2CRM administrator, I need to be able to build a webpage with no coding experience)
