

Sprint 3 Review

X2CRM Web Portal

X2Force

July 23rd, 2018

Actions to be halted:

- Get GrapesJS to show on blank HTML page. (local server)
- Add button to go to new webpage.

Actions to be started:

- Add button to redirect users to new editable webpage.
- Getting the new webpage integrated with GrapeJs. (on the AWS instance)

Actions to be continued:

- N/A

Work Completed:

- Make a blank HTML page with GrapesJS on it. (Locally)
- Make a button that will be linked to new webpage (“Go to webpage”).
- Make a button to display URL, Create date, and Last Updated (uses test data for now).

Work Not Completed:

- Getting the new webpage integrated with GrapeJS. (on the AWS instance)

Work Completion Rate:

- Completed 1.5/2 user stories (User Story: As a X2CRM administrator, I need to be able to build a webpage with no coding experience. Go to website button works but currently only directs to a single file and not a file with the given name.)
