

Sprint Plan 3
Project Plan: X2 Web Portal
Team Name: X2Force
Completion Date: July 16, 2018
Revision Version: 1.0
Revision Date: July 16, 2018

High level goal: For this sprint, the main goal is to add more of GrapesJS' toolset into the blank HTML page as well as get the button to link to the blank HTML page. Also getting the display URL button to work and have the name field give an alert rather than reloading the page and having the user lose all progress of what they wrote.

Task Listing:

User story - As a X2CRM administrator, I need to be able to generate an HTML page and use GrapesJS to customize it to extensively. (Extension of User Story 2)

Task 1 - Make the "Go to Webpage" button render a new HTML page.

Task 2 - Integrate more GrapesJS tools with the HTML page, with at more styling and drag and drop options for users to style their page. (Extension of User Story 2)

Task 3 - Display URL for the webpage last update.

Task 4 - Getting the name field to not reload the page every invalid input, but just display alert.

Team Roles:

Clifton Chiang - Working on getting the "Go to your webpage" button to link to the blank HTML page with GrapesJS on it. (extension of second sprint)

Justin Toyomitsu - Working on getting a model to work to save a url to the database. Currently the URL is always default to null. Then get the display url to work.

Justin Law - Working on getting the create button to not reload every invalid error and instead just spit an alert.

Shawn Chumbar and Pulkit Sood - Understanding more about GrapesJS, and extending GrapesJS functionality so that users may have drag and drop options at least, along with styling options.
