<p align="center">**Sprint Plan**
Project Plan: X2 Web Portal
Team Name: X2Force
Completion Date: July 09, 2018
Revision Version: 1.0
Revision Date: July 9, 2018</p>

High level goal: For this sprint, the main goal is to start working on the project and get the bare minimum framework started for the third sprint.

Task Listing:

User story - As a developer, I need to be able to understand the technologies we are using for development and have an understanding the languages we are developing in.

Task 1 - Get a blank page with GrapesJS in it.
Task 2 - Have an alternative server to run and test code.
Task 3 - Be able to display the "URL" when user creates Web Page.

Team Roles:

Clifton Chiang - Working on getting button to show up on the "View Item" page that will link to blank HTML page with GrapesJS integrated.

Justin Toyomitsu - Working on getting a displayUrl button, cleaning up the view page and getting Justin and everyone familiar with the relationship between html and js. Also making a new model page to be able to input new row into database and to retrieve information.

Justin Law - Getting the input field for name to not take in any spaces or weird character as website name. This is because the url must be a valid url.

Pulkit Sood - Deploy code on Heroku, possibly replace AWS

Shawn Chumbar - Create a test html page for GrapesJS, not served via php server
