Release Plan
Project Plan: X2 Web Portal
Team Name: X2Force
Release Name: Project Release
Release Date: July 25, 2018
Revision Version: 4.0
Revision Date: July 24, 2018

High-Level Goals: We want to be able to integrate GrapesJS into this web portal page that we are creating within an app. We want the user to be able to implement web page elements using GrapesJS and to implement our apps' specific tools into the webpage using GrapesJS. Lastly, we want to have GrapesJS be able to create specific buttons and other items that were developed for this app.

[Story Points are on a Fibonacci Scale: 1 2 3 5 8 13 21]

Sprint 1:
- As a developer, I need to be knowledgeable in PHP and GrapesJS in order to properly create the necessary features for the web page. (**21 Story Points**)
- As a developer, I need a web server to be able to start developing. (finished during Sprint 2) (**8 Story Points**)

Sprint 2:
- As a developer, I need a web server to be able to start developing. (continued from Sprint 1) (**8 Story Points**)
- As a developer, I want to restrict the types of characters X2CRM administrators can use to create their webpage names so that it will be easier to generate valid URLs with the given name. (**8 Story Points**)
- As an X2CRM administrator, I want a button to be able to display a shareable webpage's URL so that I can navigate to my webpage or give to others so that they may be able to access it as well. (**5 Story Points**)
- As an X2CRM administrator, I want to be able to generate a web page name and description so that I can easily organize my webpages. (**3 Story Points**)

Sprint 3:
- As an X2CRM administrator, I want to be able to have drag and drop template options using GrapesJS so that I can customize my webpage. (**13 Story Points**)
- As an X2CRM administrator, I want a button to be able to link me to a new webpage that will be blank and contain GrapesJS so I can create my webpage. (**13 Story Points**)

Product Backlog:

- To generate a valid public URL that non-X2CRM users can access that will take them to the created landing page.
- Integrating X2CRM tools with GrapesJS.
- Prevent page refresh when shown error message for creating web page with invalid name.
