Sprint 2 Review

X2CRM Web Portal

X2Force

July 17th, 2018

Actions to be halted:
- Add button to "display" URL (using filler data as of now).
- Add button to go to webpage builder (doesn't work as of yet).
- Setting up developments server (AWS).
- Team members not acquainted with development technologies reading documentation/tutorials on PHP and JavaScript
- Procure alternate server to run the app on. (this did not work).

Actions to be started:
- Understanding how to talk to GrapeJS though the HTML.
- Link "Go to Webpage" button to the blank HTML page.
- Include error checking for invalid names for users' webpages so we can create valid URLs for said webpages.
- Create a button that will display user's URL, last updated and Create Date.

Actions to be continued:
- N/A

Work Completed:
- Make a button without functionality that will be linked to the blank HTML page ("Go to webpage").
- Have a form for naming and describing a website and storing it under that user's profile
- Setting up an AWS instance.

Work Not Completed:
- Restricting name of website.
- Button to display url, last updated, and created Date.

Work Completion Rate:
- Completed 2/4 of user stories
